

AMI Video outline

Problem Introduction

Why we make this project ?

we can say

With the popularity of the rental car industry, it has become a very big issue how to judge the damage to the vehicle.

Or something else? DO YOU HAVE ANY IDEA?

That's why we make this project !

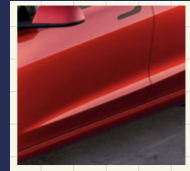

A more detailed introduction to our classification problem

CG* (Blender, if have enough time)

a vehicle model drive into the scene

rotate the camera and zoom in

highlight the relevant region and give the question, which class does this damage belong to?

change to other view and take the question again?

Fortunately, We got the solution!

Team Introduction

How we got the solution ?

Team member introduction, I think we don't need to introduce one by one, just like show some team work video. The narrator can introduce the division of labor in our group.

Narration: We have a professional team and the team members work through different divisions to hit our goals.

A more detailed introduction to the tasks of each group using workflow.

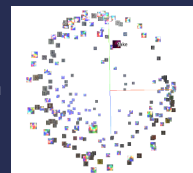

Model Introduction

model building group

model introduction

show the process of the model selection and the model comparison process like the Pacha Kucha

visualize the result of the model use like tensorboard

website building group

Website and Result

Model -> Website

back end

front end

HERE I need some information because I don't familiar with the website.

combine to CG and show the whole process if possible
